# Control in your hands, wherever you are.

## Arm and disarm your alarm

Say goodbye to shared PIN codes and alarm keypads. Instead, activate the alarm securely from your phone. Set the Late to Arm notification so you can be sure your business is secure, even when you're not there. Use Bluetooth to arm your site locally when internet connectivity is unavailable.

## Easily manage users

We've made it simple to add, edit, and remove users, and manage exactly which parts of the building they can control – even temporary users like contractors and cleaners. You'll see who has activated the alarm or requested access at doors using the history log.

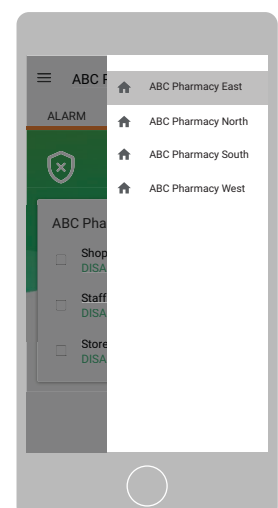

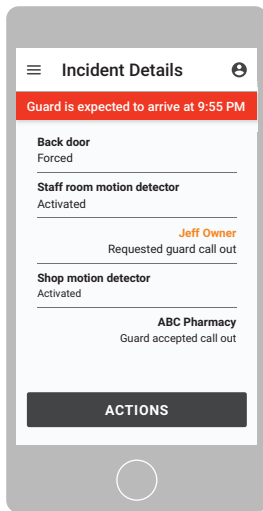

## Control your doors

Lock and unlock doors using your phone. Configure the doors to be locked 24/7, requiring users to request access at the reader, or set a schedule for when doors should be unlocked.

## Manage multiple sites

If you manage multiple businesses, you can control the security of them all from one app. Easily move between different branches of your businesses within the app, or even between your business and your home.
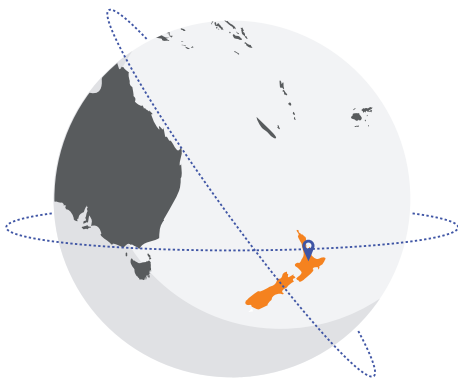

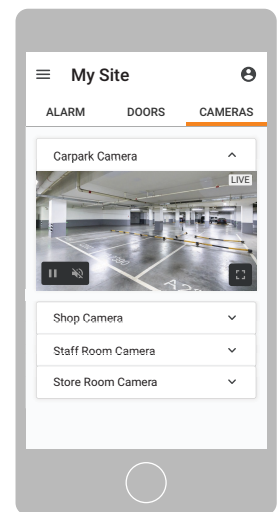

## Request a security guard

You'll get notified as soon as an alarm is triggered and receive clear details about what is happening on your site. You'll then be able to decide whether to silence the alarm and close the incident – if you know why the alarm went off – or request a guard to check out the situation first-hand. If you miss the notification, the system can automatically call a guard for you.

## Verify alarms with video

View live video of your site, and use it to visually confirm who is on your site prior to unlocking a door or arming the alarm. If an alarm is triggered, quickly view an associated clip that is automatically saved and verify that it isn't a false alarm.

## Proudly New Zealand made

Gallagher is a trusted global leader in security. We've taken our extensive knowledge and award-winning technology and created something to give small and medium business owners greater control in managing their security.

# Book a free site visit

A free site visit with one of our certified Install Partners will identify the needs of your business and provide you with a quote. The cost consists of the installation fee and the monthly subscription for your chosen services.

## Pay for what you need

Base app:

### Security Alarm System

Arm and disarm your system, and manage alarms and users from your smartphone at any time.

Available services:

### Access Control

Gain access through doors using your smartphone, lock and unlock doors remotely, and restrict who can access certain areas.

### Guarding

Manually call a guard in response to an alarm or have the system call a guard automatically. Guard call out fees are not included.

### Video

Watch live and stored video on-demand. Verify alarms by viewing an associated clip that is saved when an alarm is triggered.

### Cellular Back-up

A cellular router will provide a backup path to the cloud in the event of the site losing its internet connection.
